

Visibility is everything

The Patient Movement Items Tracking System [PMITS] is a Department of Defense Military Health System application that electronically tracks medical equipment used during aeromedical evacuations [AE]. PMITS tracks the biomedical equipment needed and used to support critical patient life sustainment and monitoring during AE missions. PMITS is used by the Army and Air Force during peacetime, contingency and wartime operations.

Product Features

- Provides easy to use hand-held scanners and bar code technology
- Provides current asset visibility through a worldwide data exchange
- Flexible report generation to support mission planners, AE personnel, and logisticians in managing and redistributing medical equipment as required

Benefits to the Military Health System

- Timely and accurate identification of PMI equipment
- Enables recycling of needed equipment, assuring AE missions are not delayed
- Lowers AE investment in inventory and improves equipment availability
